4 steps of DOM Manipulation

1) Select Element, under which you need to add new Element or Elements
    a. const existingElement = document.getElementById('ExistingElement');
2) Create new Element or Elements
    a. const newElement = document.createElement('div');
3) Add content to the Elements
    a. newElement.innerHTML = '<a>content of newly created elements'
4) Append this newly created element with content to selected existing elements
    a. existingElement.append(newElement)

Practise using any CSS frameworks and play with DOM Manipulation to create conditional rendered components under iteration
